## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-16 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The prior art, USPN 6,085,161 to MacKenty, teaches a system and method for auditorially representing pages of HTML data. More specifically, Mackenty provides a parser that receives an HTML page and outputs a tree data structure that represents the received HTML page. The reader uses the tree data structure to produce sound representing the text and tags contained in the HTML page. The reader produces the sound by performing a depth first traversal of the tree data structure. The reference discloses a method for interpreting a tree structure, however, it fails to teach or suggest the creation of a new subtree within the document object model of the first electronic document. The reference, HTML 4.01 Specification, W3C Recommendation, provides a description of 'long descriptions' and the utilization of long descriptions with images of an HTML document object model; however, the reference fails to teach or suggest the creation of a new subtree within the document object model of the first electronic document, wherein the subtree is a first sibling node following the image in the document object model, and wherein the subtree comprises a renderable hyperlink to the second electronic document containing the long description of the images.

In reference to independent claims 1, 7, and 13, the claimed features of parsing a first electronic document, creating a document object model, determining if an image within the first electronic document has an associated attribute that names a URL for a second document

Art Unit: 2178

wherein the second document contains a long description of the image of the first document, and editing the document object model by creating a new subtree within the document object model of the first electronic wherein the subtree is a first sibling node following the image in the document object model, and comprises a renderable hyperlink to the second electronic document containing the long description of the image is not shown in the prior art of record and would not have been obvious to one of ordinary skill in the art to have combined the prior art of record to come up with applicant's claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Ludwig whose telephone number is 571-272-4127. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong can be reached on 571-272-4124.
